

Proposed 25-storey office tower at 585 Ste-Catherine

May I suggest the developer show some concern for the birds that may be killed flying into this glass tower by incorporating visual markers to alert birds to the glass but do not hinder our ability to see through the glass. Feather Friendly Technologies offer such options. Also FLAP (fatal light awareness program) advocates on behalf of birds colliding with buildings and should be contacted for more details. The last thing downtown Montreal needs is dead birds because of more glass towers hindering their flight during Spring and Fall migration.

Possible companies to consider:

Ornilux Bird Protection Glass

AviProtek Bird Friendly Glass

Thank you and I hope this idea will be considered.
