1 CONTEXTE ET MANDAT

JADCO prévoit réaliser un développement immobilier à même le stationnement des Halles d'Anjou, un ensemble commercial à proximité des Galeries d'Anjou. Le développement prévu est situé à proximité des centres commerciaux des Galeries d'Anjou, des Halles d'Anjou et des autoroutes 40 et 25. Celui-ci comprend l'ajout de 685 unités de logement situées derrière les Halles d'Anjou et accessibles via l'avenue des Halles. La zone d'étude proposée est illustrée ci-dessous.

FIGURE 1 SECTEUR À L'ÉTUDE

Intervia a été mandaté pour réaliser une étude d'impact sur les déplacements à l'intérieur de la zone à l'étude comprenant les sept intersections suivantes :

1. Rue Jean-Talon / Boulevard des Galeries d'Anjou;
 2. Rue Jean-Talon / Avenue des Halles;
 3. Rue Jean-Talon / Accès A-40;
 4. Accès Galeries d'Anjou / Halles d'Anjou / Boulevard des Galeries d'Anjou;
 5. Rue Bélanger / Boulevard des Galeries d'Anjou;
 6. Rue Bélanger / Avenue de Beaufort;
 7. Rue Bélanger / Avenue des Halles.

Pour se faire, Intervia a effectué un relevé de comptage d'une journée en semaine et d'une journée en fin de semaine aux 7 intersections ci-dessus. La caractérisation du secteur à l'étude en termes de réseau routier, de camionnage, des déplacements en transport actif et collectif et de stationnement sur rue et hors rue a été effectuée. Une analyse des conditions de circulations actuelles et projetées à l'heure de pointe de l'avant-midi, de l'après-midi et de la fin de semaine a été réalisée afin de démontrer l'impact de l'implantation du projet. Enfin, si requis, une proposition de mesures d'atténuation des impacts du projet est fournie.

2 MÉTHODOLOGIE

La méthodologie employée dans le cadre de cette étude d'impact sur la circulation pour un projet de développement aux Halles d'Anjou est la suivante :

- Collecte de données auprès de JADCO corporation immobilière (intrants fournis, densification du projet, réunion de démarrage, enjeux propres au site à l'étude);
- Réalisation d'un relevé terrain et de comptages de circulation pour le secteur de l'étude;
- Caractérisation de la situation actuelle;
 - Description des réseaux de transport de chaque mode (véhiculaire, transport en commun, actif)
 - Modélisation des conditions de circulation actuelles avec le logiciel PTV Vistro pour les heures de pointe AM et PM d'une journée de semaine ainsi que l'heure de pointe de la fin de semaine
 - Analyse des résultats de la simulation pour les conditions actuelles obtenues par la méthodologie du HCM (Transportation Research Board, 2016)
- Caractérisation de la situation projetée;
 - Génération, distribution et affectation des débits générés par le futur développement en suivant la méthodologie du Trip Generation Handbook (Institute of Transportation Engineers, 2017) et en se basant sur les données de l'enquête O-D 2018 de l'ARTM
 - Modélisation des conditions de circulation projetées avec le logiciel PTV Vistro pour les heures de pointe AM et PM d'une journée de semaine ainsi que l'heure de pointe de la fin de semaine
 - Analyse des résultats de la simulation pour les conditions projetées obtenus par la méthodologie du HCM (Transportation Research Board, 2016)
- Formulation de recommandations de mesures d'atténuation (si nécessaire).

2.1 RELEVÉS ET INTRANTS

Une visite terrain du secteur à l'étude a été effectuée le 22 juin 2021 et a permis de mettre en lumière les éléments suivants :

- La trame urbaine de l'avenue des Halles et ses alentours;
- Les enjeux de circulation et les comportements des usagers sur l'avenue des Halles et aux intersections à l'étude;
- La présence des différents modes de transport.

Dans le but d'obtenir un portrait représentatif des conditions de circulation actuelles, des comptages multimodes (véhiculaires, piétons et cyclistes) par mouvements ont été réalisés pour une journée de semaine le jeudi 17 juin et le mardi 22 juin 2021 de 6h30 à 9h30, 11h à 13h et 15h30 à 18h30 et pour une journée de fin de semaine le samedi 19 juin 2021 de 10h30 à 18h30 aux intersections suivantes :

1. Jean-Talon / Boul. des Galeries d'Anjou;
2. Jean-Talon / Avenue des Halles;
3. Jean-Talon / Accès A-40;
4. Accès Galeries d'Anjou / Halles d'Anjou / Boul. des Galeries d'Anjou;
5. Rue Bélanger / Boul. des Galeries d'Anjou;
6. Rue Bélanger / Avenue de Beaufort;
7. Rue Bélanger / Avenue des Halles.

Le plan d'implantation du développement immobilier ainsi que les plans de feu de circulation ont été fournis en intrants.

2.1.1 Indicateurs de performances

L'indicateur de performance privilégié lors d'une étude d'impacts sur la circulation est le niveau de service (NDS). Il est défini à l'aide du retard moyen pour franchir l'intersection et caractérise principalement le niveau de confort perçu par les usagers à l'intersection. Un niveau de service « A » représente un retard moyen très court inférieur à 10 secondes alors que pour un niveau de service « F », le retard moyen par véhicule dépasse les 80 secondes. Le tableau 1 présente les niveaux de services pour une intersection contrôlée à feux ou avec arrêts.

TABLEAU 1 NIVEAU DE SERVICE (INSTITUTE OF TRANSPORTATION ENGINEERS, 2008)

Niveau de service	Retard moyen (avec feux)	Retard moyen (avec arrêts)
A	0-10 secondes	0-10 secondes
B	10-20 secondes	10-15 secondes
C	20-35 secondes	15-25 secondes
D	35-55 secondes	25-35 secondes
E	55-80 secondes	35-50 secondes
F	> 80 secondes	> 50 secondes

3 CARACTÉRISTIQUES DE LA ZONE D'ÉTUDE

Cette section présente la caractérisation de la zone à l'étude selon les différents modes de transport et les conditions de circulation actuelles.

3.1 DESCRIPTION DU RÉSEAU

Le réseau routier, de transport actif et de transport collectif est présenté dans les sections suivantes. Le réseau de camionnage et le stationnement sont également décrits.

3.1.1 Réseau routier

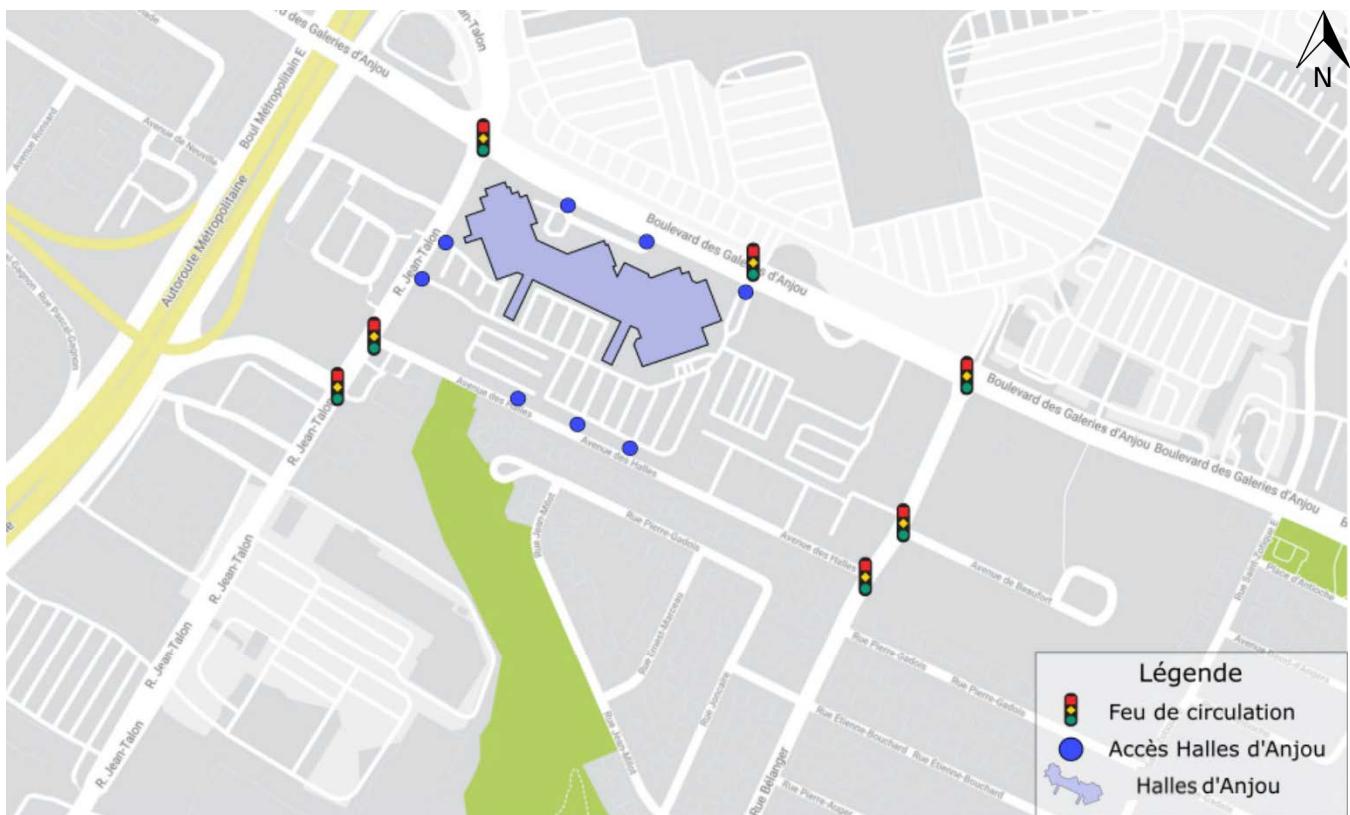

Le développement immobilier prévu sur l'avenue des Halles se trouve à proximité de l'intersection des autoroutes 25 et 40 et des Halles d'Anjou. La figure ci-dessous expose la hiérarchie du réseau routier dans le secteur à l'étude ainsi que le mode de gestion des intersections. L'accès au développement immobilier se situe sur l'avenue des Halles qui est une rue locale ayant une vitesse permise de 40 km/h. L'accès au développement immobilier est entouré de collectrices et d'artères secondaires et les intersections à proximité du développement immobilier sont toutes gérées par des feux de circulation.

FIGURE 2 HIÉRARCHIE DU RÉSEAU ROUTIER ET MODE DE GESTION DES INTERSECTIONS DANS LE SECTEUR À L'ÉTUDE

Plusieurs accès commerciaux se trouvent sur le périmètre de la zone à l'étude (voir figure 3). En effet, l'accès aux stationnements des Halles d'Anjou peut se faire à partir du boulevard des Galeries d'Anjou, de la rue Jean-Talon et de l'avenue des Halles.

FIGURE 3 ACCÈS COMMERCIAUX ACTUELS DE LA ZONE À L'ÉTUDE

SOURCE : TRAITEMENT INTERVIA

3.1.2 Réseau de transport actif

En ce qui concerne le transport actif, plusieurs aménagements sont présents dans le secteur à l'étude. Des trottoirs et des pistes cyclables permettent respectivement aux piétons et aux cyclistes de se déplacer de façon sécuritaire. Le ☐, le ☒ et la figure suivante résument les aménagements en place actuellement. Il est à noter que l'avenue des Halles comporte un trottoir du côté est de la chaussée seulement sur la majeure partie du tronçon. De plus, une signalisation en direction nord indique la présence de véhicules et de cyclistes sur la chaussée.

Des traverses piétonnes sont présentes seulement aux intersections et aux accès du boulevard des Galeries d'Anjou dans le secteur à l'étude. Des feux piétons sont présents à toutes les intersections du secteur à l'étude à l'exception des deux traverses suivantes qui sont interdites aux piétons :

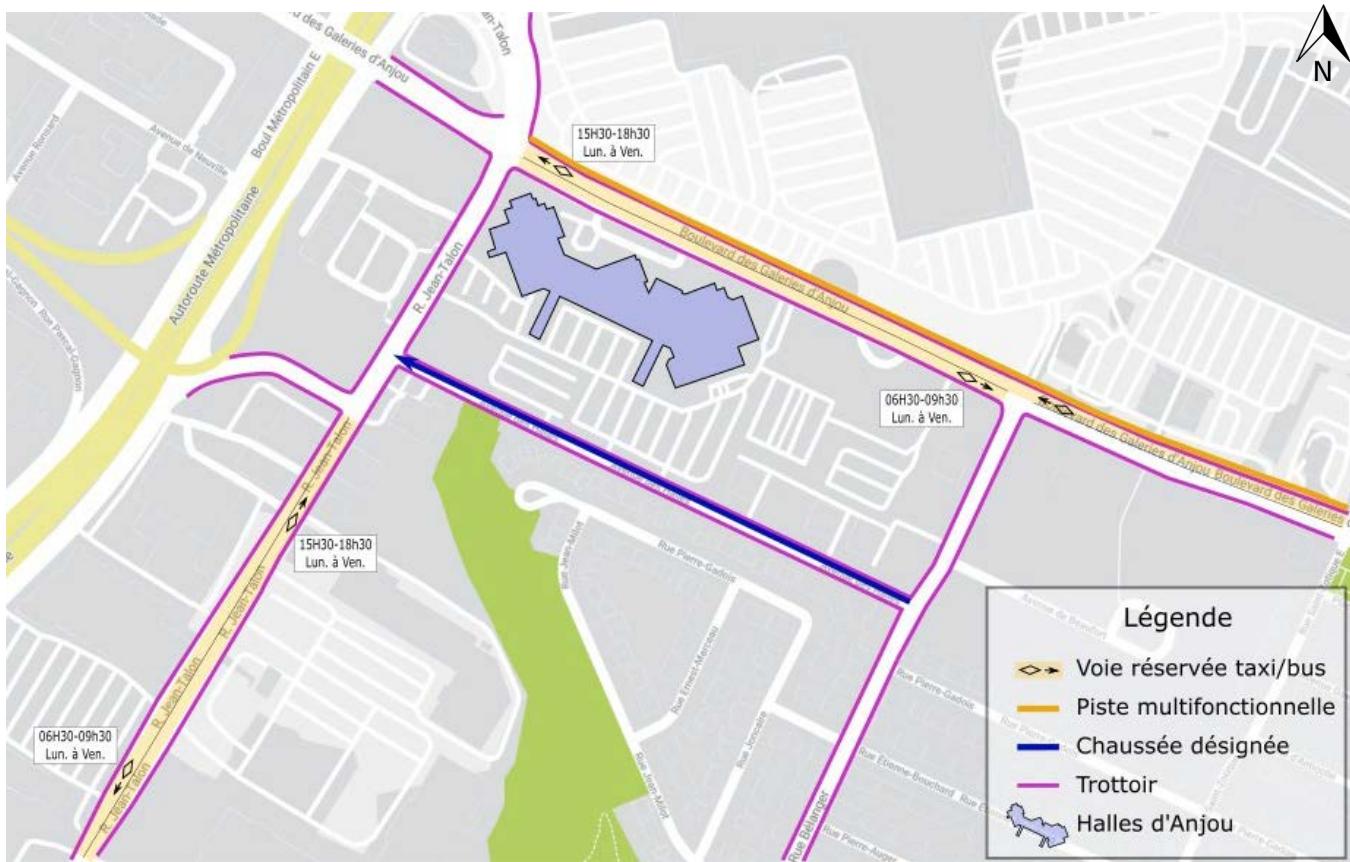

- Approche est de l'intersection Jean-Talon / Accès A-40;
- Approche ouest de l'intersection Jean-Talon / Avenue des Halles.
- Réseau de transport actif des axes nord-sud à l'étude

	Trottoir	Piste cyclable		
	Côté est	Côté ouest	Côté est	Côté ouest
Boulevard des Galeries d'Anjou	Oui	Oui	Multifonctionnelle	Non
Accès A-40	Oui	Oui	Non	Non
Avenue des Halles	Oui	Non	Chaussée désignée	Non

- Réseau de transport actif des axes est-ouest à l'étude

	Trottoir	Piste cyclable		
	Côté nord	Côté sud	Côté nord	Côté sud
Rue Jean-Talon	Oui	Oui	Non	Non
Rue Bélanger	Oui	Oui	Non	Non
Avenue de Beaufort	Oui	Oui	Non	Non

FIGURE 4 RÉSEAU DE TRANSPORT ACTIF ET VOIES RÉSERVÉES

SOURCE : TRAITEMENT INTERVIA

3.1.3 Réseau de transport collectif

Le réseau de transport collectif dans le secteur à l'étude est seulement constitué d'autobus, car aucune station de métro ou de train est présente dans ce secteur. Les arrêts et lignes d'autobus sont représentés respectivement sur la figure 5 et la figure 6 et les voies réservées sont présentées sur la figure précédente.

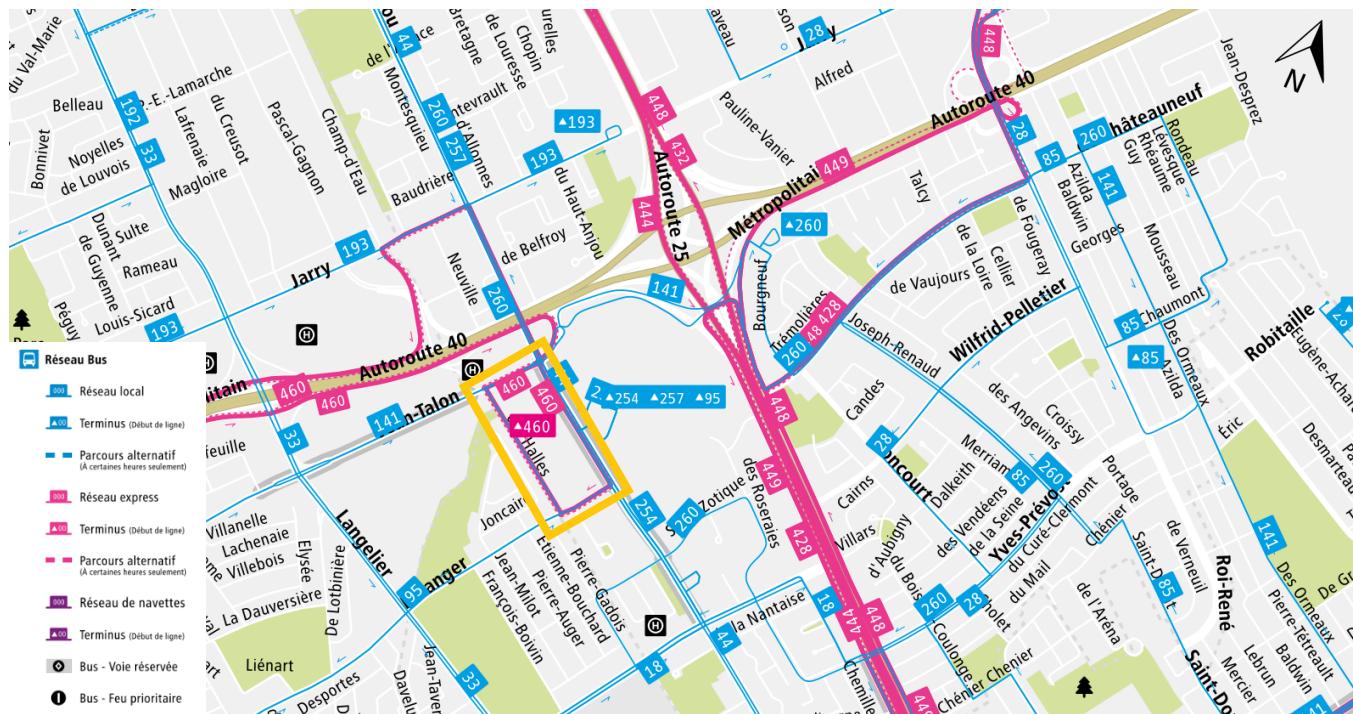

Deux (2) arrêts sur l'avenue des Halles permettent le passage des lignes d'autobus 95 et 460. La ligne 95 fait le trajet entre la station Jean-Talon et les Galeries d'Anjou et la ligne 460 (Réseau Express) transite entre Dorval et les Galeries d'Anjou. Deux arrêts sur la rue Jean-Talon à proximité du nouveau développement immobilier desservent les lignes d'autobus 141 et 372.

FIGURE 5 ARRÊT D'AUTOBUS DANS LE SECTEUR À L'ÉTUDE

SOURCE : SOCIÉTÉ DE TRANSPORT DE MONTRÉAL, TRAITEMENT : INTERVIA

FIGURE 6 LIGNE D'AUTOBUS DANS LE SECTEUR À L'ÉTUDE

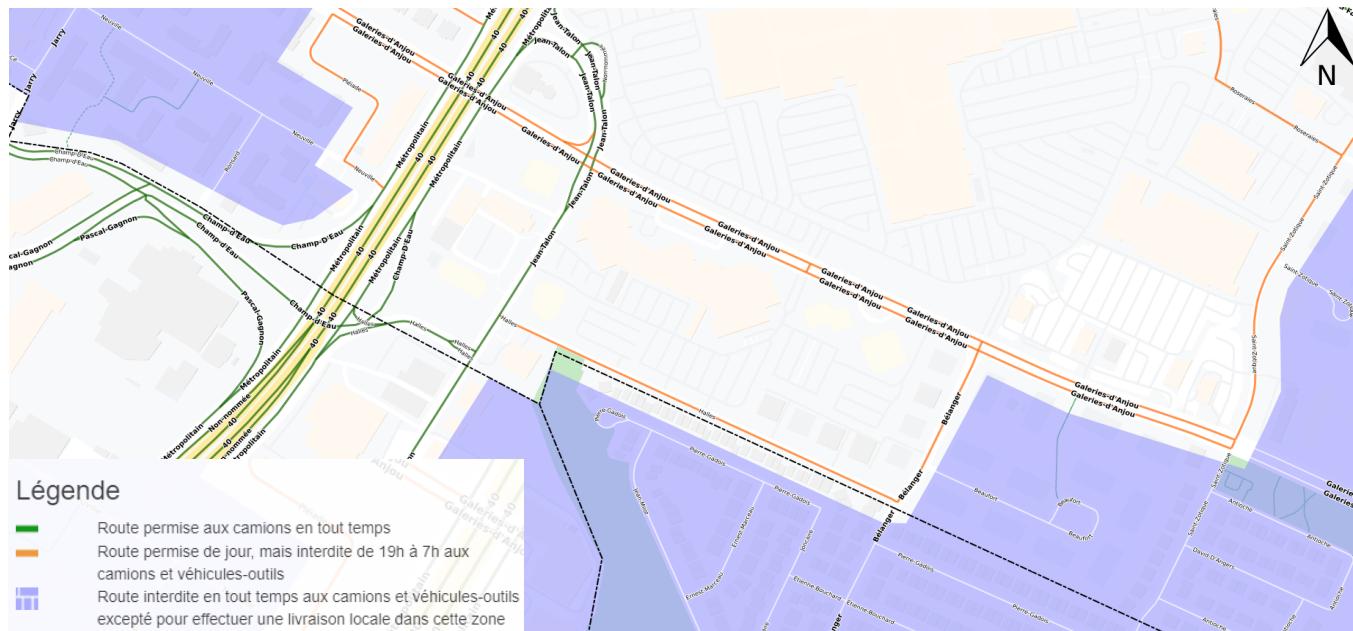

SOURCE : SOCIÉTÉ DE TRANSPORT DE MONTRÉAL, TRAITEMENT : INTERVIA

3.1.4 Réseau de camionnage

Le réseau de camionnage du secteur à l'étude est présenté sur la figure ci-dessous. Le boulevard des Galeries d'Anjou, la rue Bélanger et l'avenue des Halles sont interdits aux camions de nuit, c'est-à-dire de 19h à 7h, excepté la livraison locale. L'avenue Beaufort est interdite aux camions en tout temps excepté la livraison locale et la rue Jean-Talon est permise aux camions en tout temps.

FIGURE 7 RÉSEAU DE CAMIONNAGE DANS LE SECTEUR À L'ÉTUDE

SOURCE : VILLE DE MONTRÉAL

3.1.5 Stationnement

La présence d'interdictions de stationnement et de stationnement a été relevée dans le secteur à l'étude et est présentée dans cette section.

3.1.5.1 Interdiction de stationnement sur rue

Les interdictions de stationnement sur rue relevées dans le secteur sont les suivantes :

FIGURE 8 STATIONNEMENT SUR RUE DANS LE SECTEUR À L'ÉTUDE

SOURCE : TRAITEMENT INTERVIA

3.1.5.2 Stationnement hors rue

Plusieurs stationnements hors rue sont présents dans le secteur et en périphérie, ceux-ci incluent le stationnement des Halles d'Anjou, des Galeries d'Anjou et plusieurs autres stationnements privés. Ces stationnements ne sont cependant pas tous accessibles au publics ou disponibles pour les résidents. C'est pourquoi un ratio de stationnement de 1 case / 30 m² d'espace commercial est conservé pour répondre à la demande commerciale et un ratio de 1 case par logement est prévue pour la demande résidentielle. Il est important de noter que les ratios présentés offrent plus de cases de stationnement que le minimum requis par le règlement de 1 case / 60 m² et 0,75

case / logement. Le détail des stationnements prévus pour le projet peut être consulté dans le PPCMOI préparé pour celui-ci.

L'emplacement des stationnements hors-rue du secteur est indiqué sur la figure ci-dessous.

FIGURE 9 STATIONNEMENTS HORS RUE DANS LE SECTEUR À L'ÉTUDE

3.2 CONDITIONS DE CIRCULATION ACTUELLES

Cette section traite des débits et des conditions de circulation actuelles des intersections à l'étude.

3.2.1 Débits de circulation

Cette section décrit les débits de circulation aux intersections à l'étude et les périodes de pointes déterminées à la suite de l'analyse des comptages effectués en juin 2021 mentionnés dans la section 2.1. Les périodes de pointes identifiées sont les suivantes :

- La pointe du matin (AM) : 8h00 à 9h00;
- La pointe de l'après-midi (PM) : 16h00 à 17h00;
- La pointe de la fin de semaine (FDS) : 14h00 à 15h00.

3.2.2 Conditions de circulation

Les conditions actuelles de circulation dans la zone d'étude ont été établies à l'aide du logiciel PTV Vistro pour les heures de pointe du matin, de l'après-midi et de la fin de semaine.

Lors de la visite terrain, il a été observé que le boulevard des Galeries d'Anjou est congestionné dans les deux directions en pointe PM. De plus, même si la voie réservée pour autobus et taxi n'est pas en fonction, elle est peu utilisée sauf pour effectuer le virage à droite. Le modèle Vistro est donc calibré pour tenir compte de cette observation.

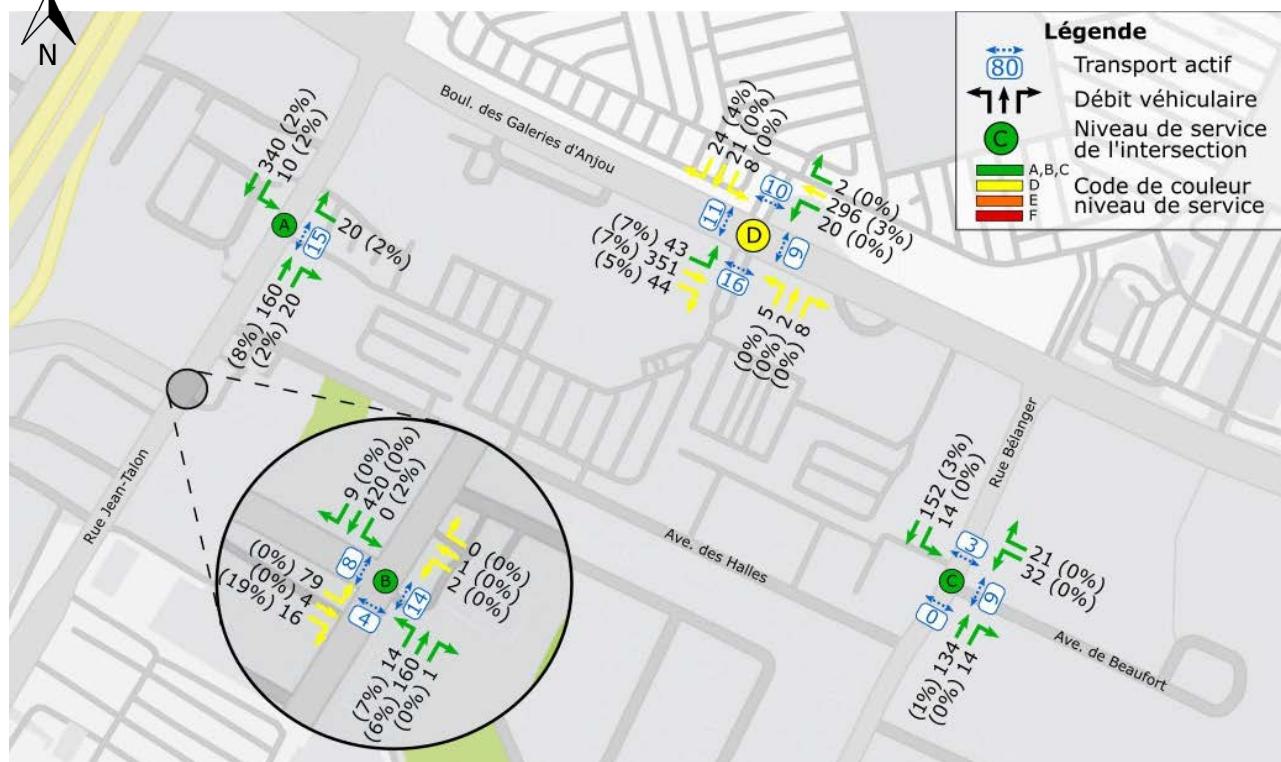

3.2.2.1 Heure de pointe du matin

La figure 10 et la figure 11 présentent les niveaux de services véhiculaires par mouvement lors de la pointe AM.

FIGURE 10 NIVEAU DE SERVICE DANS LA SITUATION ACTUELLE LORS DE LA POINTE AM – PARTIE 1

FIGURE 11 NIVEAU DE SERVICE DANS LA SITUATION ACTUELLE LORS DE LA POINTE AM – PARTIE 2

L'analyse des résultats montre que :

- Les intersections et accès du boulevard des Galeries d'Anjou opèrent avec les niveaux de service les plus élevés. En effet, les carrefours suivants opèrent avec des niveaux de service de D (retards véhiculaires entre 35 et 55 secondes).
 - Accès aux Galeries d'Anjou / Halles d'Anjou
 - Intersection avec la rue Bélanger
- Des niveaux de service de B et C sont observés aux intersections et accès de l'avenue des Halles, ce qui représente des retards entre 10 et 35 secondes.
- Les approches nord et sud de l'intersection de la rue Jean-Talon avec l'avenue des Halles et l'accès à l'autoroute 40 opèrent avec des niveaux de services de D. Cette situation s'explique par le temps limité qui est accordé à ces mouvements dans la programmation de feu actuelle.
 - Les niveaux de service globaux de ces intersections sont toutefois respectivement de C et de B.

3.2.2.2 Heure de pointe de l'après-midi

La figure 12 et la figure 13 présentent les niveaux de services véhiculaires lors de la pointe PM.

FIGURE 12 NIVEAU DE SERVICE DANS LA SITUATION ACTUELLE LORS DE LA POINTE PM – PARTIE 1

FIGURE 13 NIVEAU DE SERVICE DANS LA SITUATION ACTUELLE LORS DE LA POINTE PM – PARTIE 2

L'analyse des résultats montre que :

Les intersections et accès du boulevard des Galeries d'Anjou opèrent avec les niveaux de service les plus élevés. En effet, les débits véhiculaires importants sur le boulevard des Galeries d'Anjou en après-midi engendrent des niveaux de service D et de E, avec des retards allant jusqu'à 78 secondes pour l'accès aux Galeries d'Anjou.

- Intersection avec la rue Jean-Talon
 - Le mouvement de virage à droite à partir de l'approche est opère avec un niveau de service de F
 - Le mouvement de tout droit à partir de l'approche sud opère avec un niveau de service de E
- Accès aux Galeries d'Anjou / Halles d'Anjou
 - Le mouvement de tout droit à partir de l'approche sud opère avec un niveau de service de F
 - Le mouvement de tout droit à partir de l'approche nord opère avec un niveau de service de E
- Intersection avec la rue Bélanger
 - Le mouvement de virage à gauche et de tout droit de l'approche ouest opèrent avec un niveau de service de E
 - Le mouvement de virage à gauche de l'approche est opère avec un niveau de service de E
- L'approche ouest de l'intersection de la rue Bélanger et de l'avenue des Halles opère avec un niveau de service de D. Le niveau de service de l'intersection demeure toutefois C, malgré les débits importants provenant de l'ouest.

3.2.2.3 Heure de pointe de la fin de semaine

La figure 14 et la figure 15 présentent les niveaux de services véhiculaires lors de la pointe FDS.

FIGURE 14 NIVEAU DE SERVICE DANS LA SITUATION ACTUELLE LORS DE LA POINTE FDS – PARTIE 1

FIGURE 15 NIVEAU DE SERVICE DANS LA SITUATION ACTUELLE LORS DE LA POINTE FDS – PARTIE 2

Les observations suivantes sont réalisées :

- Les intersections et accès du boulevard des Galeries d'Anjou présentent les niveaux de service les plus élevés. Des débits véhiculaires importants sur le boulevard des Galeries d'Anjou la fin de semaine expliquent ces niveaux de service de D.
 - Intersection avec la rue Jean-Talon
 - Le mouvement de virage à droite et à gauche à partir de l'approche est opère avec un niveau de service de E
 - Accès aux Galeries d'Anjou / Halles d'Anjou
 - Le mouvement de virage à droite à partir de l'approche ouest opère avec un niveau de service de E
 - Le mouvement de virage à droite à partir de l'approche est opère avec un niveau de service de E
 - Intersection avec la rue Bélanger
 - Le mouvement de virage à gauche et de tout droit de l'approche ouest opèrent avec un niveau de service de E
 - Le mouvement de virage à gauche de l'approche est opère avec un niveau de service de F
 - Le mouvement de tout droit de l'approche est opère avec un niveau de service de E
- L'approche est de l'intersection de la rue Jean-Talon avec l'avenue des Halles opère avec des niveaux de service de E et F. Un débit de plus de 500 véhicules allant tout droit cause le retard à cette approche.

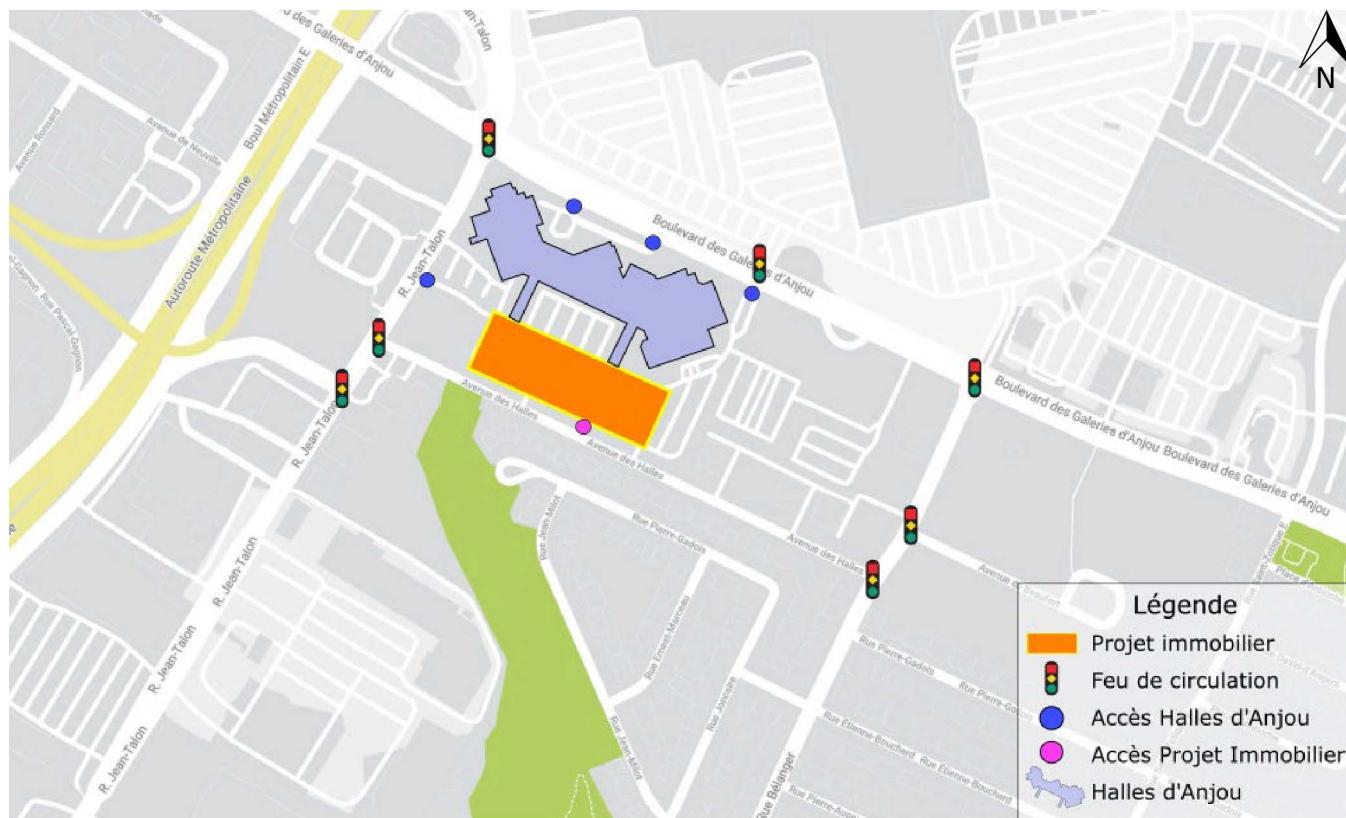

4 DÉPLACEMENTS GÉNÉRÉS PAR LE PROJET

Cette section traite des déplacements générés par le projet de développement résidentiel, la réaffectation de débits commerciaux et les conditions de circulation projetées.

4.1 RÉAFFECTATION DES DÉBITS COMMERCIAUX

Cette section traite de la réaffectation des débits véhiculaires empruntant l'accès commercial situé sur la rue des Halles d'Anjou. En effet, le développement résidentiel projeté amènera le retrait de l'accès au stationnement des Halles d'Anjou via la rue du même nom et amènera les usagers à emprunter soit l'accès sur Jean-Talon ou celui sur Galeries d'Anjou. L'accès projeté sur l'Avenue des Halles servira pour les résidents du nouveau développement immobilier. La figure ci-dessous présente les accès projetés.

FIGURE 16 ACCÈS DU PROJET IMMOBILIER ENVISAGÉ

Pour ce faire, une génération des Halles d'Anjou a été réalisée à laquelle les débits de circulation de l'accès sur le boulevard des Galeries d'Anjou ont été retirés. Les débits de circulation restants ont ensuite été séparés entre les accès Jean-Talon et Halles d'Anjou. Le tableau suivant présente le résumé de la génération :

TABLEAU 2 INFORMATION SUR LA GÉNÉRATION DES DÉBITS

Pointe	Usage	Unités	Code ITE	Land-use
AM	Commercial	150 000 pi ²	820	Shopping center
PM	Commercial	150 000 pi ²	820	Shopping center
FDS	Commercial	150 000 pi ²	820	Shopping center

TABLEAU 3 GÉNÉRATION DES DÉBITS POUR LES HALLES D'ANJOU

Pointe	Débits générés		Intersection Galeries d'Anjou (comptage)		Débits aux autres accès (Jean-Talon et Halles d'Anjou)	
	Débits entrants	Débits sortants	Débits entrants	Débits sortants	Débits entrants	Débits sortants
AM	87	54	85	15	2	39
PM	352	382	124	142	228	240
FDS	443	410	242	202	201	208

Ainsi, les débits de circulation générés ont ensuite été séparés entre les accès sur les rues Jean-Talon et des Halles. Il est important de noter que la génération ci-dessus a été utilisée pour estimer les débits de circulation aux accès Jean-Talon et des Halles en vue de leur réaffectation vers les autres accès. Ces débits de circulation sont donc déjà inclus dans les comptages de la situation actuelle.

Le logiciel Vistro a été utilisé pour réaffecter les débits de circulation de l'accès sur la rue des Halles vers les accès sur la rue Jean-Talon et le boulevard des Galeries d'Anjou.

4.2 GÉNÉRATION DES DÉBITS

La méthodologie employée et la distribution et affectation des déplacements seront présentées dans cette section traitant la génération des débits.

4.2.1 Méthodologie

La génération des débits de circulation engendrés par le développement est évaluée à l'aide des données du Trip Generation Handbook, 10th edition de l'ITE (Institute of Transportation Engineers, 2017). Celui-ci permet d'obtenir une estimation des débits véhiculaires aux heures de pointe du matin, de l'après-midi et de la fin de semaine en fonction des usages prévus dans le projet. Le tableau ci-dessous détaille les usages, le code de l'ITE et les débits véhiculaires bruts générés.

TABLEAU 4 USAGES ET DÉBITS VÉHICULAIRES BRUTS GÉNÉRÉS

Pointe	Usage	Unités	Code ITE	Land-use	Débits bruts (véh/h)
AM	Résidentiel	685	221	Multi-family mid-rise	247
PM	Résidentiel	685	221	Multi-family mid-rise	301
FDS	Résidentiel	685	221	Multi-family mid-rise	301

Ensuite, les déplacements internes (entre les Halles d'Anjou et le projet), les déplacements en transport collectif et actifs ont été considérés pour obtenir les débits véhiculaires nets. Les débits internes ont été calculés à l'aide de l'outil disponible dans le NCHRP report 684 basé sur les données du Trip Generation Handbook et les parts modales ont été déterminées à l'aide des données de l'enquête O-D de 2018 de l'ARTM pour le secteur d'Anjou. Il est important de noter qu'une augmentation de la part modale du transport en commun dans le secteur est également anticipée lors du prolongement de la ligne bleue du métro de Montréal. Le tableau suivant présente les débits véhiculaires nets générés par le projet.

TABLEAU 5 DÉBITS VÉHICULAIRES NETS GÉNÉRÉS PAR LE PROJET

Pointe	Débits brut	Déplacements internes	Part modale transport en commun et transport actif	Déplacements véhiculaires	Proportion des débits entrant (%)	Proportion des débits sortant (%)	Débits véhiculaires nets (véh/h)	Débits véhiculaires nets (véh/h)
					Entrants	Sortants		
AM	247	2	40%	147	26%	74%	38	109
PM	301	35	40%	160	61%	39%	98	62
FDS	301	45	15%	218	49%	51%	107	111

Ainsi, les débits de circulation véhiculaires générés sont plus élevés aux heures de pointe du matin (160 véh/h) et de la fin de semaine (218 véh/h).

4.2.2 Distribution et affectation des déplacements

La distribution des déplacements s'est faite selon les données disponibles des déplacements du secteur Anjou de l'enquête O-D 2018 de l'ARTM. Puisque les données disponibles librement sont limitées à la période de pointe du matin, une hypothèse a été posée pour la période de l'après-midi où les déplacements sont pendulaires, c'est-à-dire l'inverse des déplacements du matin. Par conséquent, un déplacement produit le matin devient un déplacement attiré en après-midi. Dans le même ordre d'idée, les données de la pointe de l'après-midi sont considérées pour la pointe de la fin de semaine.

Le tableau suivant résume les pourcentages d'affectation des déplacements considérés.

TABLEAU 6 AFFECTATION DES DÉPLACEMENTS VÉHICULAIRES

Pointe	AM		PM		FDS	
	Origine/Destination	Depuis	Vers	Depuis	Vers	Depuis
Rue Jean-Talon Est à l'ouest du projet	18%	20%	26%	14%	24%	14%

Total	100%	100%	100%	100%	100%	100%

L'affectation des déplacements s'est faite à l'aide du logiciel Vistro et les figures suivantes présentent la variation des débits pour chaque mouvement aux intersections à l'étude entre la situation actuelle et la situation projetée.

FIGURE 17 VARIATION DES DÉBITS PAR MOUVEMENT EN POINTE AM

FIGURE 18 VARIATION DES DÉBITS PAR MOUVEMENT EN POINTE PM

FIGURE 19 VARIATION DES DÉBITS PAR MOUVEMENT EN POINTE FDS

4.3 CONDITIONS DE CIRCULATION PROJETÉES

Cette section traite des conditions de circulation projetées sans mesures d'atténuation pour les périodes de pointes étudiées à la suite de l'implantation du projet. Les sections suivantes exposent et analysent les niveaux de services des intersections à l'étude.

4.3.1 Heure de pointe de l'avant-midi

Les figures ci-dessous montrent les niveaux de services observés lors de la pointe de l'avant-midi.

FIGURE 20 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE LORS DE LA POINTE AM – PARTIE 1

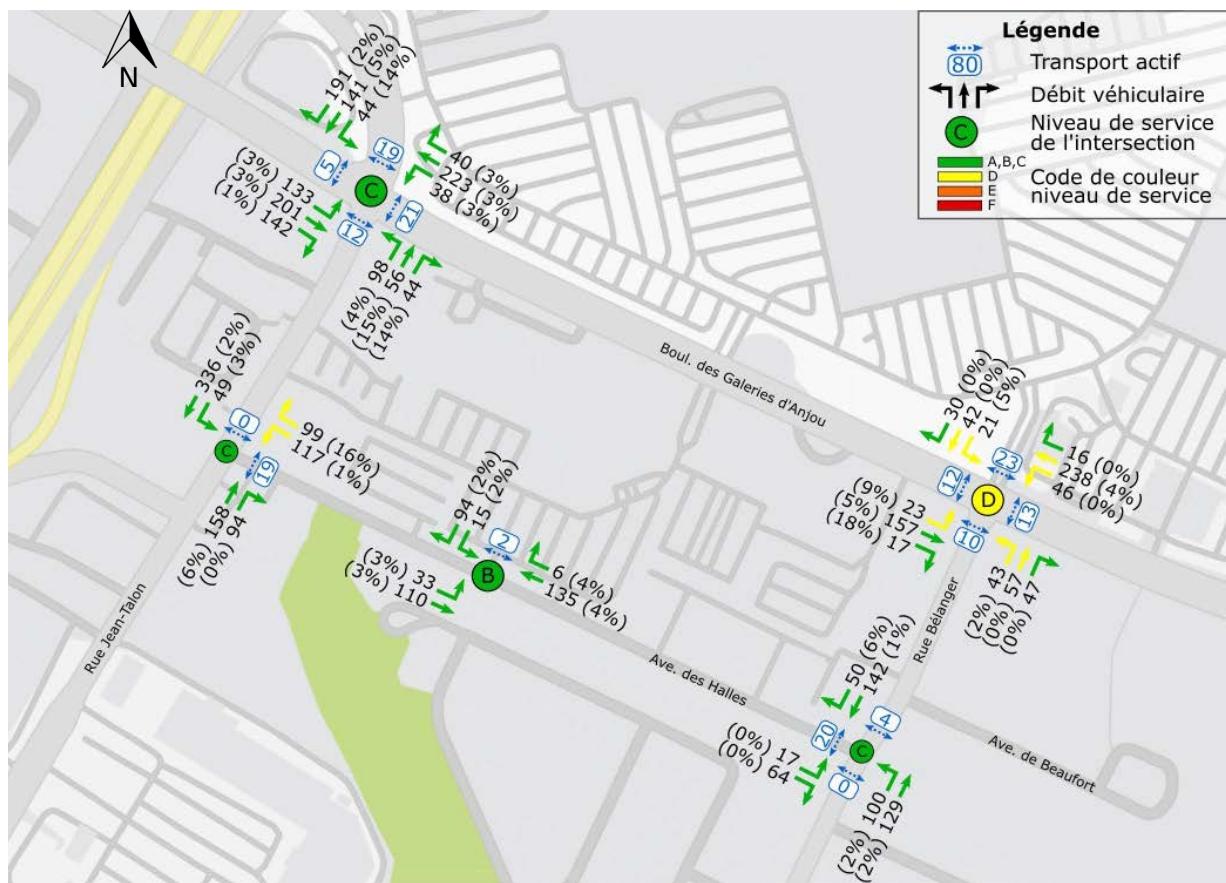

FIGURE 21 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE LORS DE LA POINTE AM – PARTIE 2

Lors de la période de pointe AM, les niveaux de services aux intersections du secteur à l'étude demeurent similaires à ceux de la situation actuelle (voir figure 20 et figure 21). Ainsi, les problématiques soulevées dans la situation actuelle persistent et le retard le plus important de 42 secondes est observé à l'approche nord de l'intersection entre le boulevard des Galeries d'Anjou et l'accès aux Galeries d'Anjou.

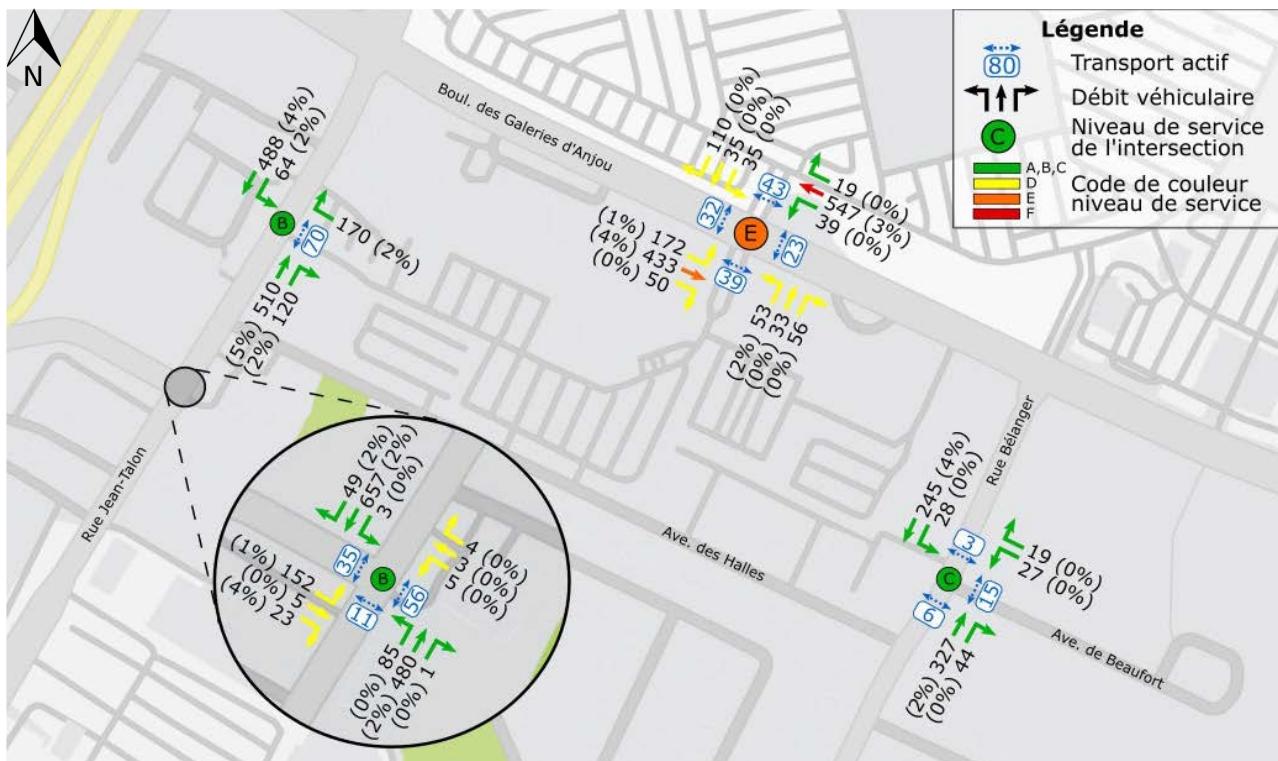

4.3.2 Heure de pointe de l'après-midi

Les figures ci-dessous montrent les niveaux de services observés lors de la pointe de l'après-midi.

FIGURE 22 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE LORS DE LA POINTE PM – PARTIE 1

FIGURE 23 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE LORS DE LA POINTE PM – PARTIE 2

De même pour la période de pointe PM lors de la situation projetée (voir figure 22 et figure 23), les niveaux de services aux intersections du secteur à l'étude restent identiques et les problématiques mentionnées précédemment sont toujours présentes excepté pour l'intersection Jean-Talon / Halles d'Anjou. En effet, le mouvement de virage à droite des Halles d'Anjou vers Jean-Talon se dégrade avec un niveau de service qui passe de D à E (+10 secondes).

4.3.3 Heure de pointe de la fin de semaine

Les figures ci-dessous montrent les niveaux de services observés lors de la pointe de la fin de semaine.

FIGURE 24 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE LORS DE LA POINTE FDS – PARTIE 1

FIGURE 25 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE LORS DE LA POINTE FDS – PARTIE 2

Pour la période de pointe FDS, les niveaux de services aux intersections (voir figure 19 et figure 20) sont semblables à la situation actuelle à l'exception de l'intersection entre la rue Jean-Talon et l'avenue des Halles. Le niveau de service anticipé à ce carrefour est de E avec un retard maximal de 75 secondes (+34 secondes). Des débits plus importants vers l'avenue des Halles, engendrés par le nouveau projet de développement immobilier créent plus de retard à cette intersection en comparaison avec la situation actuelle.

5 MESURES D'ATTÉNUATION

Les débits supplémentaires dans le secteur à l'étude engendrés par le projet de développement immobilier accentuent certaines problématiques déjà présentes dans le réseau. Cette section propose des mesures d'atténuation à ces impacts.

5.1 RECOMMANDATIONS GÉNÉRALES

Indépendamment du projet de développement immobilier, le réseau à l'étude n'est pas pleinement efficace et nécessiterait une uniformisation et des mises aux normes. Une uniformisation des durées de cycle permettrait une coordination efficace de l'axe du boulevard des Galeries d'Anjou et améliorerait les niveaux de services dans le secteur à l'étude. De plus, les intersections suivantes demandent une mise aux normes de leur plan de programmation de feu de circulation :

- Jean-Talon / Galerie d'Anjou;
- Galerie d'Anjou / Accès des Halles;
 - La modification du phasage des feux de circulation pour permettre les mouvements des approches est et ouest en simultané;
 - L'optimisation du minutage en fonction de la demande véhiculaire en période de pointe AM;
 - La modification de l'assignation des voies, soit des voies assignées au virage à gauche pour les approches est et ouest.
- Galerie d'Anjou / Bélanger;
- Bélanger / Avenue des Halles / Beaufort.

Ces bonifications au réseau permettraient de le rendre plus efficace et de diminuer les retards aux intersections.

5.2 RECOMMANDATIONS SPÉCIFIQUES AU PROJET

Tel que mentionné à la section 4, les conditions de circulation anticipées engendrent des problématiques à l'intersection suivante de la rue Jean-Talon / avenue des Halles à l'heure de pointe de la fin de semaine.

Des mesures d'atténuation ont donc été développées pour cette intersection, soient :

- Pour la pointe de l'après-midi, une modification du minutage pour atténuer l'impact du débit additionnel à l'approche de l'avenue des Halles est nécessaire.
- Pour la pointe de la fin de semaine, l'augmentation du cycle à 130 secondes et une modification du minutage pour atténuer l'impact du débit additionnel à l'approche de l'avenue des Halles est nécessaire.

Concernant l'augmentation du cycle à 130 secondes pour la période de fin de semaine, il est important d'élaborer sur cette proposition qui permet d'assurer le maintien de conditions de circulation acceptables après l'implantation du projet dans une situation anticipée jugée conservatrice. En effet, il s'agit d'un projet résidentiel dans un secteur commercial où l'analyse couvre l'heure de pointe de la période de fin de semaine, il est cependant fort probable que l'heure de pointe des usages commerciaux et résidentiels diffèrent, contribuant ainsi à une surévaluation des impacts potentiels.

De plus, bien que la modification du cycle à 130 secondes affecte la coordination de l'axe Jean-Talon et du réseau 505, l'intersection Jean-Talon / des Halles est située à la limite dudit réseau et l'intersection voisine (Jean-Talon / Galeries d'Anjou) a déjà un cycle différent. Ainsi, la modification du cycle à cet endroit pour la fin de semaine n'aurait comme effet que d'avoir le bris de coordination une intersection plus tôt.

Les figures suivantes présentent les conditions de circulation anticipées après la mise en place des mesures d'atténuation et les modifications proposées au minutage des feux de circulation pour les heures de pointe de l'après-midi et de la fin de semaine.

5.2.1 Heure de Pointe de l'après-midi

Les figures suivantes présentent les niveaux de services aux intersections à la suite de la mise en place des mesures d'atténuation proposées à Jean-Talon / avenue des Halles.

FIGURE 26 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE À LA SUITE DES MESURES D'ATTÉNUATION LORS DE LA POINTE PM – PARTIE 1

FIGURE 27 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE À LA SUITE DES MESURES D'ATTÉNUATION LORS DE LA POINTE PM – PARTIE 2

5.2.2 Heure de pointe de la fin de semaine

Les figures suivantes exposent les niveaux de services aux intersections à la suite de la mise en place des mesures d'atténuation des impacts.

FIGURE 28 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE À LA SUITE DES MESURES D'ATTÉNUATION LORS DE LA POINTE FDS – PARTIE 1

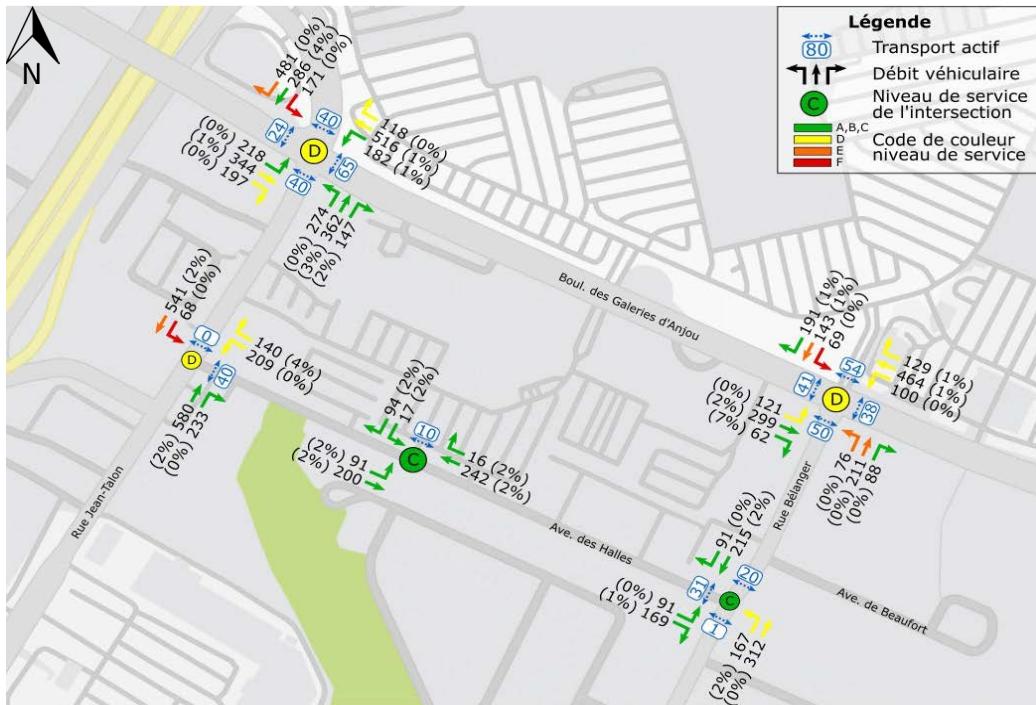

FIGURE 29 NIVEAU DE SERVICE DANS LA SITUATION PROJETÉE À LA SUITE DES MESURES D'ATTÉNUATION LORS DE LA POINTE FDS – PARTIE 2

6 CONCLUSION ET RECOMMANDATIONS

Le développement immobilier prévu par JADCO à même le stationnement des Halles d'Anjou est situé à proximité des centres commerciaux des Galeries d'Anjou, des Halles d'Anjou et des autoroutes 40 et 25. Celui-ci comprend l'ajout de 685 unités de logement situées derrière les Halles d'Anjou et accessibles via l'avenue des Halles. Intervia a été mandaté pour réaliser une étude d'impact sur les déplacements à l'intérieur de la zone d'étude.

Pour se faire, des comptages d'une journée en semaine et une journée de fin de semaine ont été effectués et ont permis d'établir le portrait du secteur à l'étude. Une description des réseaux routier, de transport actif, de transport collectif, de camionnage et la présentation du stationnement sur rue et hors rue sont fournis. Une analyse des conditions de circulations actuelles et projetées à l'heure de pointe de l'avant-midi, de l'après-midi et de la fin de semaine a été réalisée afin de démontrer l'impact de l'implantation du projet. Les principales observations sont les suivantes :

- Les pointes PM et FDS présentent conditions de circulation plus difficiles en raison des débits importants lors de ces heures de pointe. Les usages commerciaux du secteur favorisent en effet de plus grands débits le soir et la fin de semaine.
- À la fois dans la situation actuelle que dans la situation projetée, les intersections et accès du boulevard des Galeries d'Anjou opèrent avec des niveaux de services variant de D à E.

Finalement, des mesures d'atténuation sont proposées pour répondre à certaines problématiques identifiées dans la situation projetée à l'intersection Jean-Talon / avenue des Halles. Des mesures ciblées lors de l'implantation du projet cette intersection permettraient de conserver des conditions de circulation similaires à l'actuel :

- Rue Jean-Talon / Avenue des Halles (pour les pointes PM et FDS)
 - Augmentation du cycle à 130 secondes (pour la pointe FDS seulement)
 - Modification du minutage pour atténuer l'impact du débit additionnel à l'approche de l'avenue des Halles.

De façon plus globale, une uniformisation et une mise aux normes des programmations de feux serait souhaitable pour améliorer les conditions de circulation actuelles qui sont difficiles en période de pointe à certaines intersections de la zone à l'étude. Il est important de noter que cette recommandation est associée aux problématiques de circulation actuelles et non à l'ajout du projet à l'étude dans le cadre de ce mandat.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Avenue des Halles / Rue Bélanger	Signalized	HCM 6th Edition	EB Thru	0,467	32,9	C
2	Avenue de Beaufort / Rue Bélanger	Signalized	HCM 6th Edition	NB Left	0,346	30,2	C
3	Boulevard des Galeries d'Anjou / Rue Bélanger	Signalized	HCM 6th Edition	WB Left	0,491	41,8	D
4	Accès Halles / Boulevard des Galeries d'Anjou	Signalized	HCM 6th Edition	NB Thru	0,540	71,9	E
5	Boulevard des Galeries d'Anjou / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Right	0,856	43,6	D
6	Accès Halles / Rue Jean-Talon Est	Two-way stop	HCM 6th Edition	NB Right	0,197	12,4	B
7	Avenue des Halles / Rue Jean-Talon Est	Signalized	HCM 6th Edition	NB Right	0,344	26,4	C
8	Accès A-40 / Rue Jean-Talon Est	Signalized	HCM 6th Edition	SB Left	0,312	15,3	B
9	Entrée développement / Avenue des Halles	Two-way stop	HCM 6th Edition	WB Left	0,062	13,5	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Avenue des Halles / Rue Bélanger

Control Type:	Signalized	Delay (sec / veh):	32,9
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0,467

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Avenue des Halles / Rue Bélanger	Signalized	HCM 6th Edition	EB Thru	0,483	33,3	C
2	Avenue de Beaufort / Rue Bélanger	Signalized	HCM 6th Edition	NB Left	0,354	30,6	C
3	Boulevard des Galeries d'Anjou / Rue Bélanger	Signalized	HCM 6th Edition	WB Left	0,498	41,8	D
4	Accès Halles / Boulevard des Galeries d'Anjou	Signalized	HCM 6th Edition	NB Thru	0,571	70,5	E
5	Boulevard des Galeries d'Anjou / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Right	0,863	43,5	D
6	Accès Halles / Rue Jean-Talon Est	Two-way stop	HCM 6th Edition	NB Right	0,297	13,9	B
7	Avenue des Halles / Rue Jean-Talon Est	Signalized	HCM 6th Edition	NB Right	0,375	30,8	C
8	Accès A-40 / Rue Jean-Talon Est	Signalized	HCM 6th Edition	SB Left	0,320	15,9	B
9	Entrée développement / Avenue des Halles	Two-way stop	HCM 6th Edition	WB Left	0,022	14,4	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Avenue des Halles / Rue Bélanger

Control Type:	Signalized	Delay (sec / veh):	33,3
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0,483

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Avenue des Halles / Rue Bélanger	Signalized	HCM 6th Edition	EB Thru	0,516	33,4	C
2	Avenue de Beaufort / Rue Bélanger	Signalized	HCM 6th Edition	NB Right	0,345	31,4	C
3	Boulevard des Galeries d'Anjou / Rue Bélanger	Signalized	HCM 6th Edition	WB Left	0,520	42,2	D
4	Accès Halles / Boulevard des Galeries d'Anjou	Signalized	HCM 6th Edition	WB Right	0,555	47,6	D
5	Boulevard des Galeries d'Anjou / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Left	0,728	39,4	D
6	Accès Halles / Rue Jean-Talon Est	Two-way stop	HCM 6th Edition	NB Right	0,264	13,9	B
7	Avenue des Halles / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Left	0,549	75,4	E
8	Accès A-40 / Rue Jean-Talon Est	Signalized	HCM 6th Edition	SB Left	0,341	15,1	B
9	Entrée développement / Avenue des Halles	Two-way stop	HCM 6th Edition	WB Left	0,043	15,1	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Avenue des Halles / Rue Bélanger

Control Type:	Signalized	Delay (sec / veh):	33,4
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0,516

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Avenue des Halles / Rue Bélanger	Signalized	HCM 6th Edition	EB Thru	0,483	33,3	C
2	Avenue de Beaufort / Rue Bélanger	Signalized	HCM 6th Edition	NB Left	0,354	30,6	C
3	Boulevard des Galeries d'Anjou / Rue Bélanger	Signalized	HCM 6th Edition	WB Left	0,498	41,8	D
4	Accès Halles / Boulevard des Galeries d'Anjou	Signalized	HCM 6th Edition	NB Thru	0,573	70,8	E
5	Boulevard des Galeries d'Anjou / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Right	0,863	43,5	D
6	Accès Halles / Rue Jean-Talon Est	Two-way stop	HCM 6th Edition	NB Right	0,297	13,9	B
7	Avenue des Halles / Rue Jean-Talon Est	Signalized	HCM 6th Edition	NB Right	0,380	30,0	C
8	Accès A-40 / Rue Jean-Talon Est	Signalized	HCM 6th Edition	SB Left	0,317	15,0	B
9	Entrée développement / Avenue des Halles	Two-way stop	HCM 6th Edition	WB Left	0,022	14,4	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Avenue des Halles / Rue Bélanger

Control Type:	Signalized	Delay (sec / veh):	33,3
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0,483

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Avenue des Halles / Rue Bélanger	Signalized	HCM 6th Edition	EB Thru	0,516	33,4	C
2	Avenue de Beaufort / Rue Bélanger	Signalized	HCM 6th Edition	NB Right	0,345	31,4	C
3	Boulevard des Galeries d'Anjou / Rue Bélanger	Signalized	HCM 6th Edition	WB Left	0,520	42,2	D
4	Accès Halles / Boulevard des Galeries d'Anjou	Signalized	HCM 6th Edition	WB Right	0,557	47,4	D
5	Boulevard des Galeries d'Anjou / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Left	0,728	39,4	D
6	Accès Halles / Rue Jean-Talon Est	Two-way stop	HCM 6th Edition	NB Right	0,264	13,9	B
7	Avenue des Halles / Rue Jean-Talon Est	Signalized	HCM 6th Edition	WB Left	0,527	48,0	D
8	Accès A-40 / Rue Jean-Talon Est	Signalized	HCM 6th Edition	SB Left	0,336	15,7	B
9	Entrée développement / Avenue des Halles	Two-way stop	HCM 6th Edition	WB Left	0,043	15,1	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Avenue des Halles / Rue Bélanger

Control Type:	Signalized	Delay (sec / veh):	33,4
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0,516
