***ÉTUDE D'ENSOLEILLEMENT***

***PROJET VIGER***

***AOÛT 2007***

# ANALYSE

Impact d'ensoleillement du Projet Viger sur le milieu environnant de Faubourg Québec

## Résidences sur la rue St-Christophe et le côté est de la rue St-André

- L'ensoleillement des résidences demeurera tel quel pour la période du printemps jusqu'à l'automne, à l'exception de l'ombrage projeté par la forme de l'édifice situé au coin des rues Saint-Hubert et du Glacis.
- L'édifice prévu projettera de l'ombre durant 2 heures dans l'après-midi, sur les résidences situées du côté sud du quadrilatère.
- Durant l'hiver, le projet étant situé au sud de ces résidences, une ombre sera projetée durant la majeure partie de la journée. Cette situation est aussi vécue par un grand nombre de rues montréalaises qui ont la même orientation.

## Complexe résidentiel Solano

- Le projet projettera de l'ombre seulement sur la partie nord-ouest (orientation montréalaise) du complexe résidentiel.
- De l'équinoxe d'automne à celle du printemps, une ombre sera projetée, à partir de 15h00, sur une portion des résidences de la rue Notre-Dame (coin Saint-Hubert) par le volume qui longe le viaduc Notre-Dame.

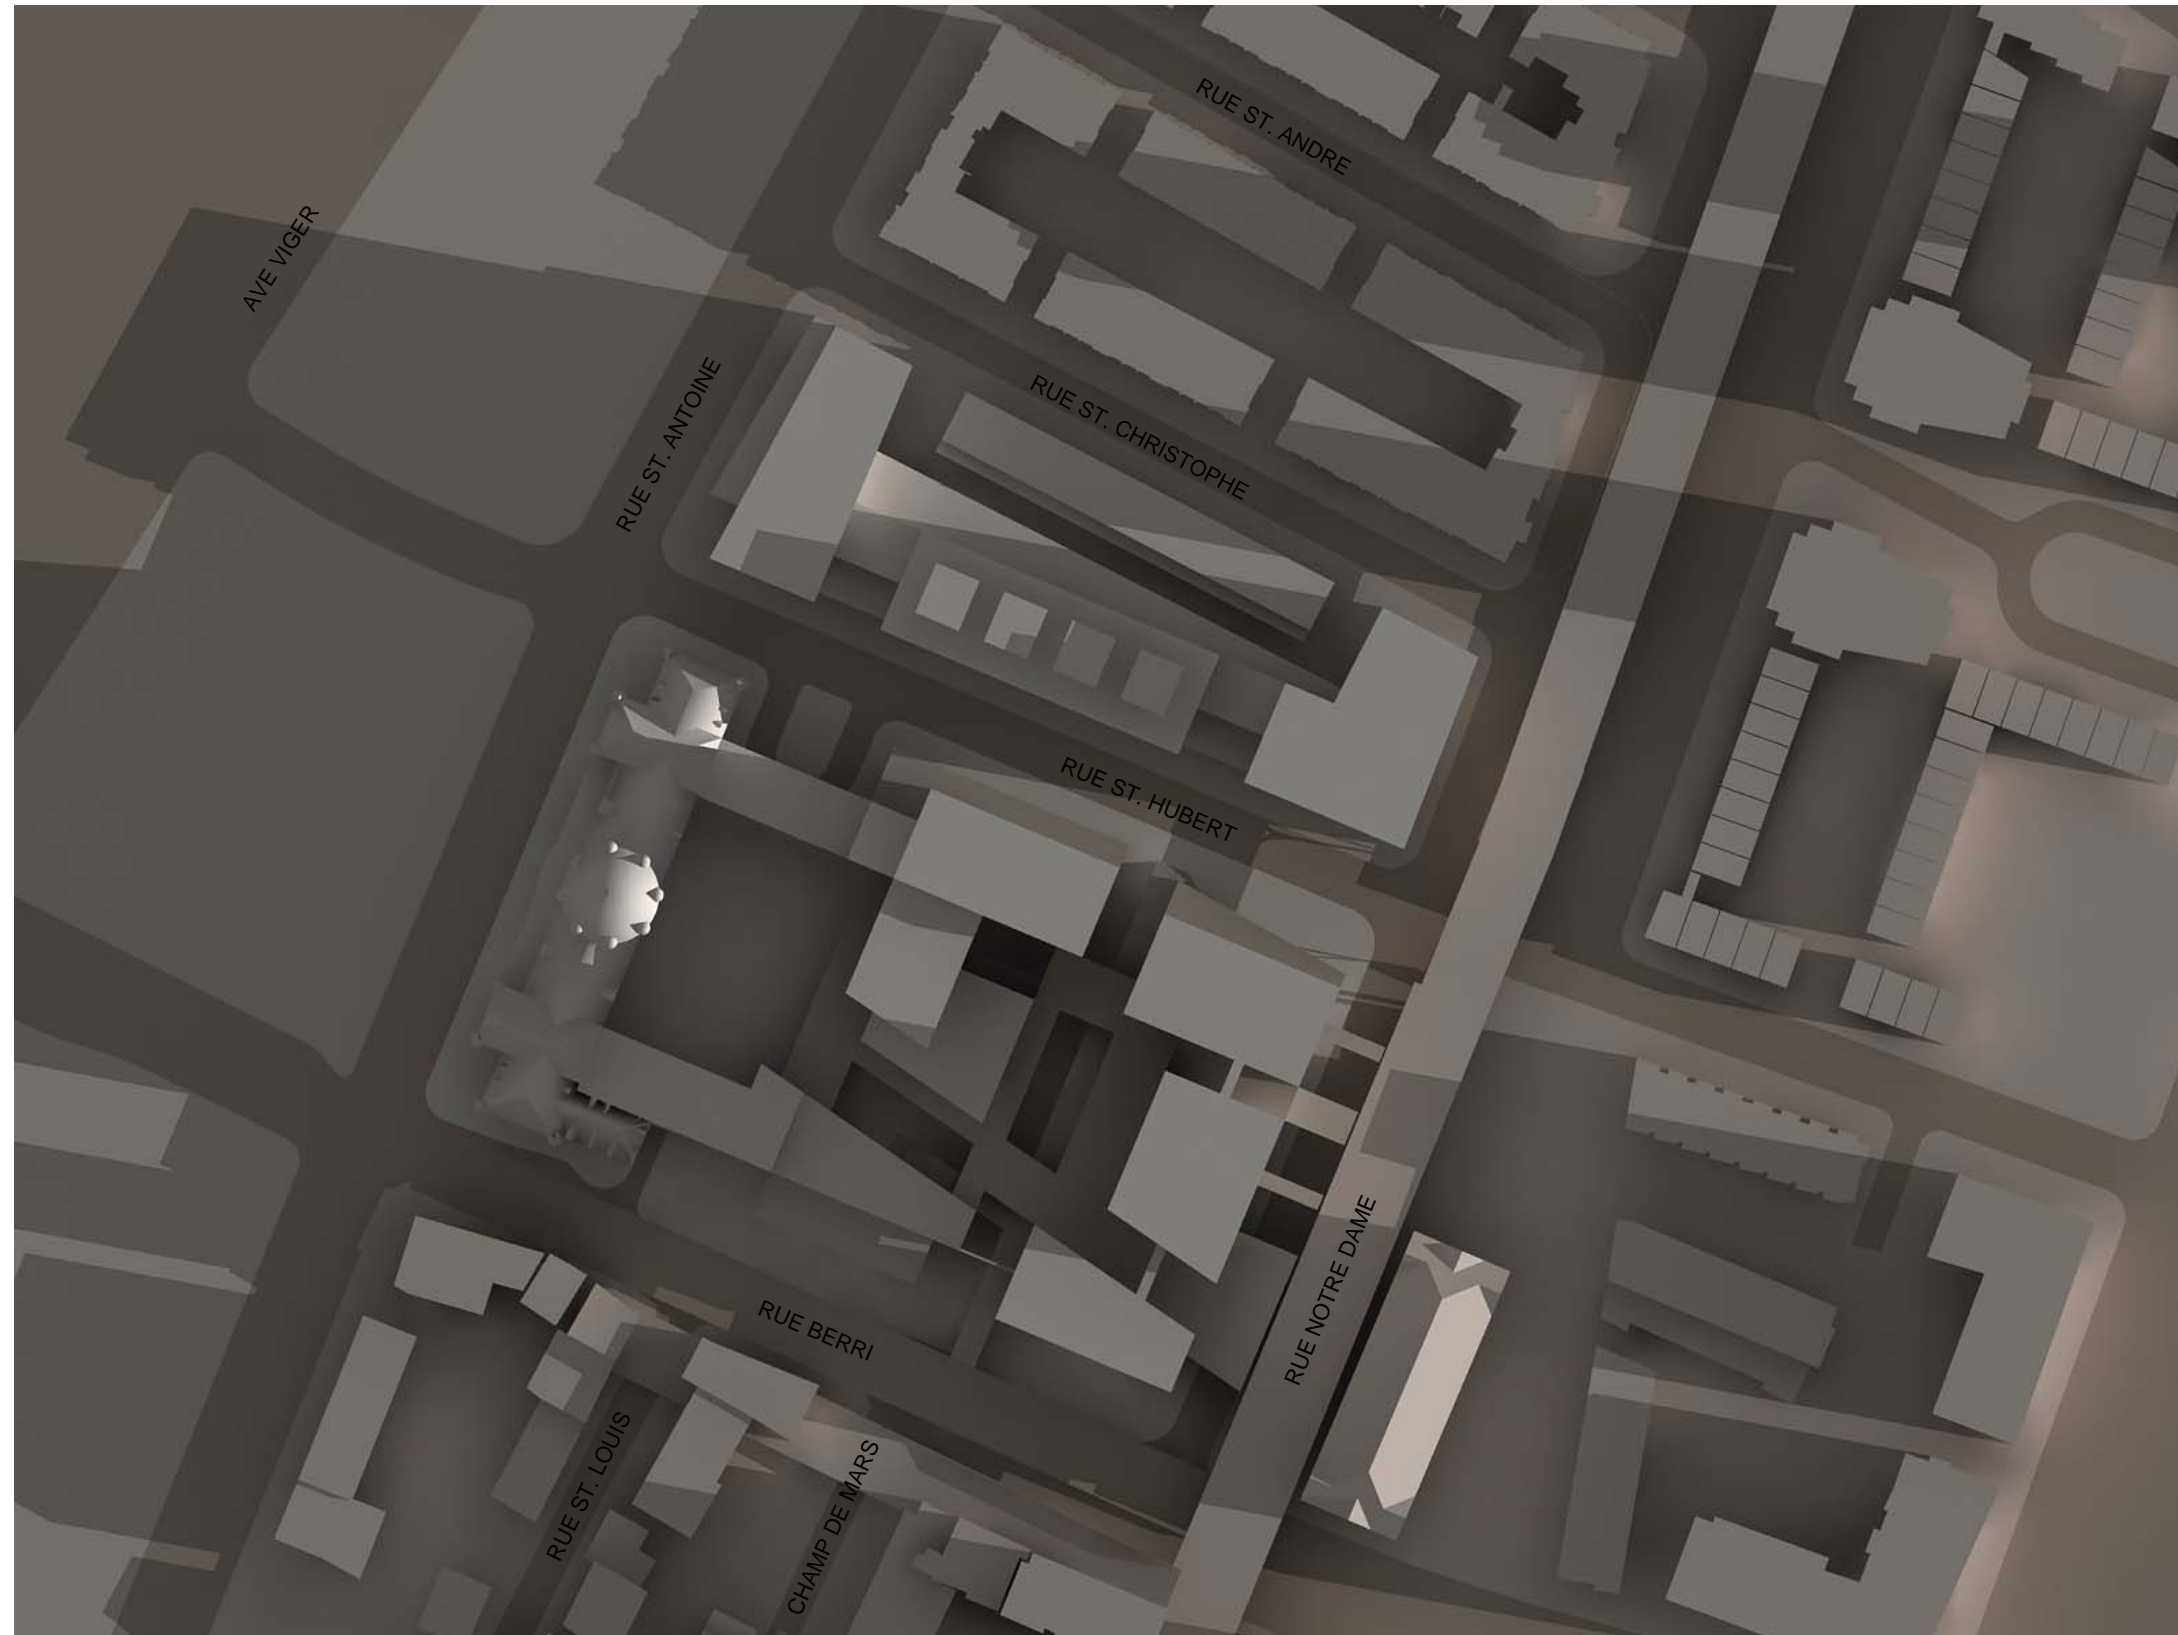

### Square Dalhousie et les résidences situées au sud

- Aucun impact d'ensoleillement durant la période du printemps jusqu'à l'automne.
- Durant la période d'hiver un impact sera ressenti seulement après 15h00, situation vécue par un grand nombre de rues montréalaises.

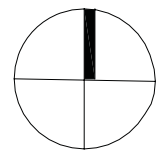

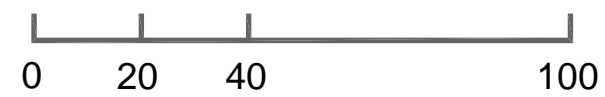

### Rue Berri

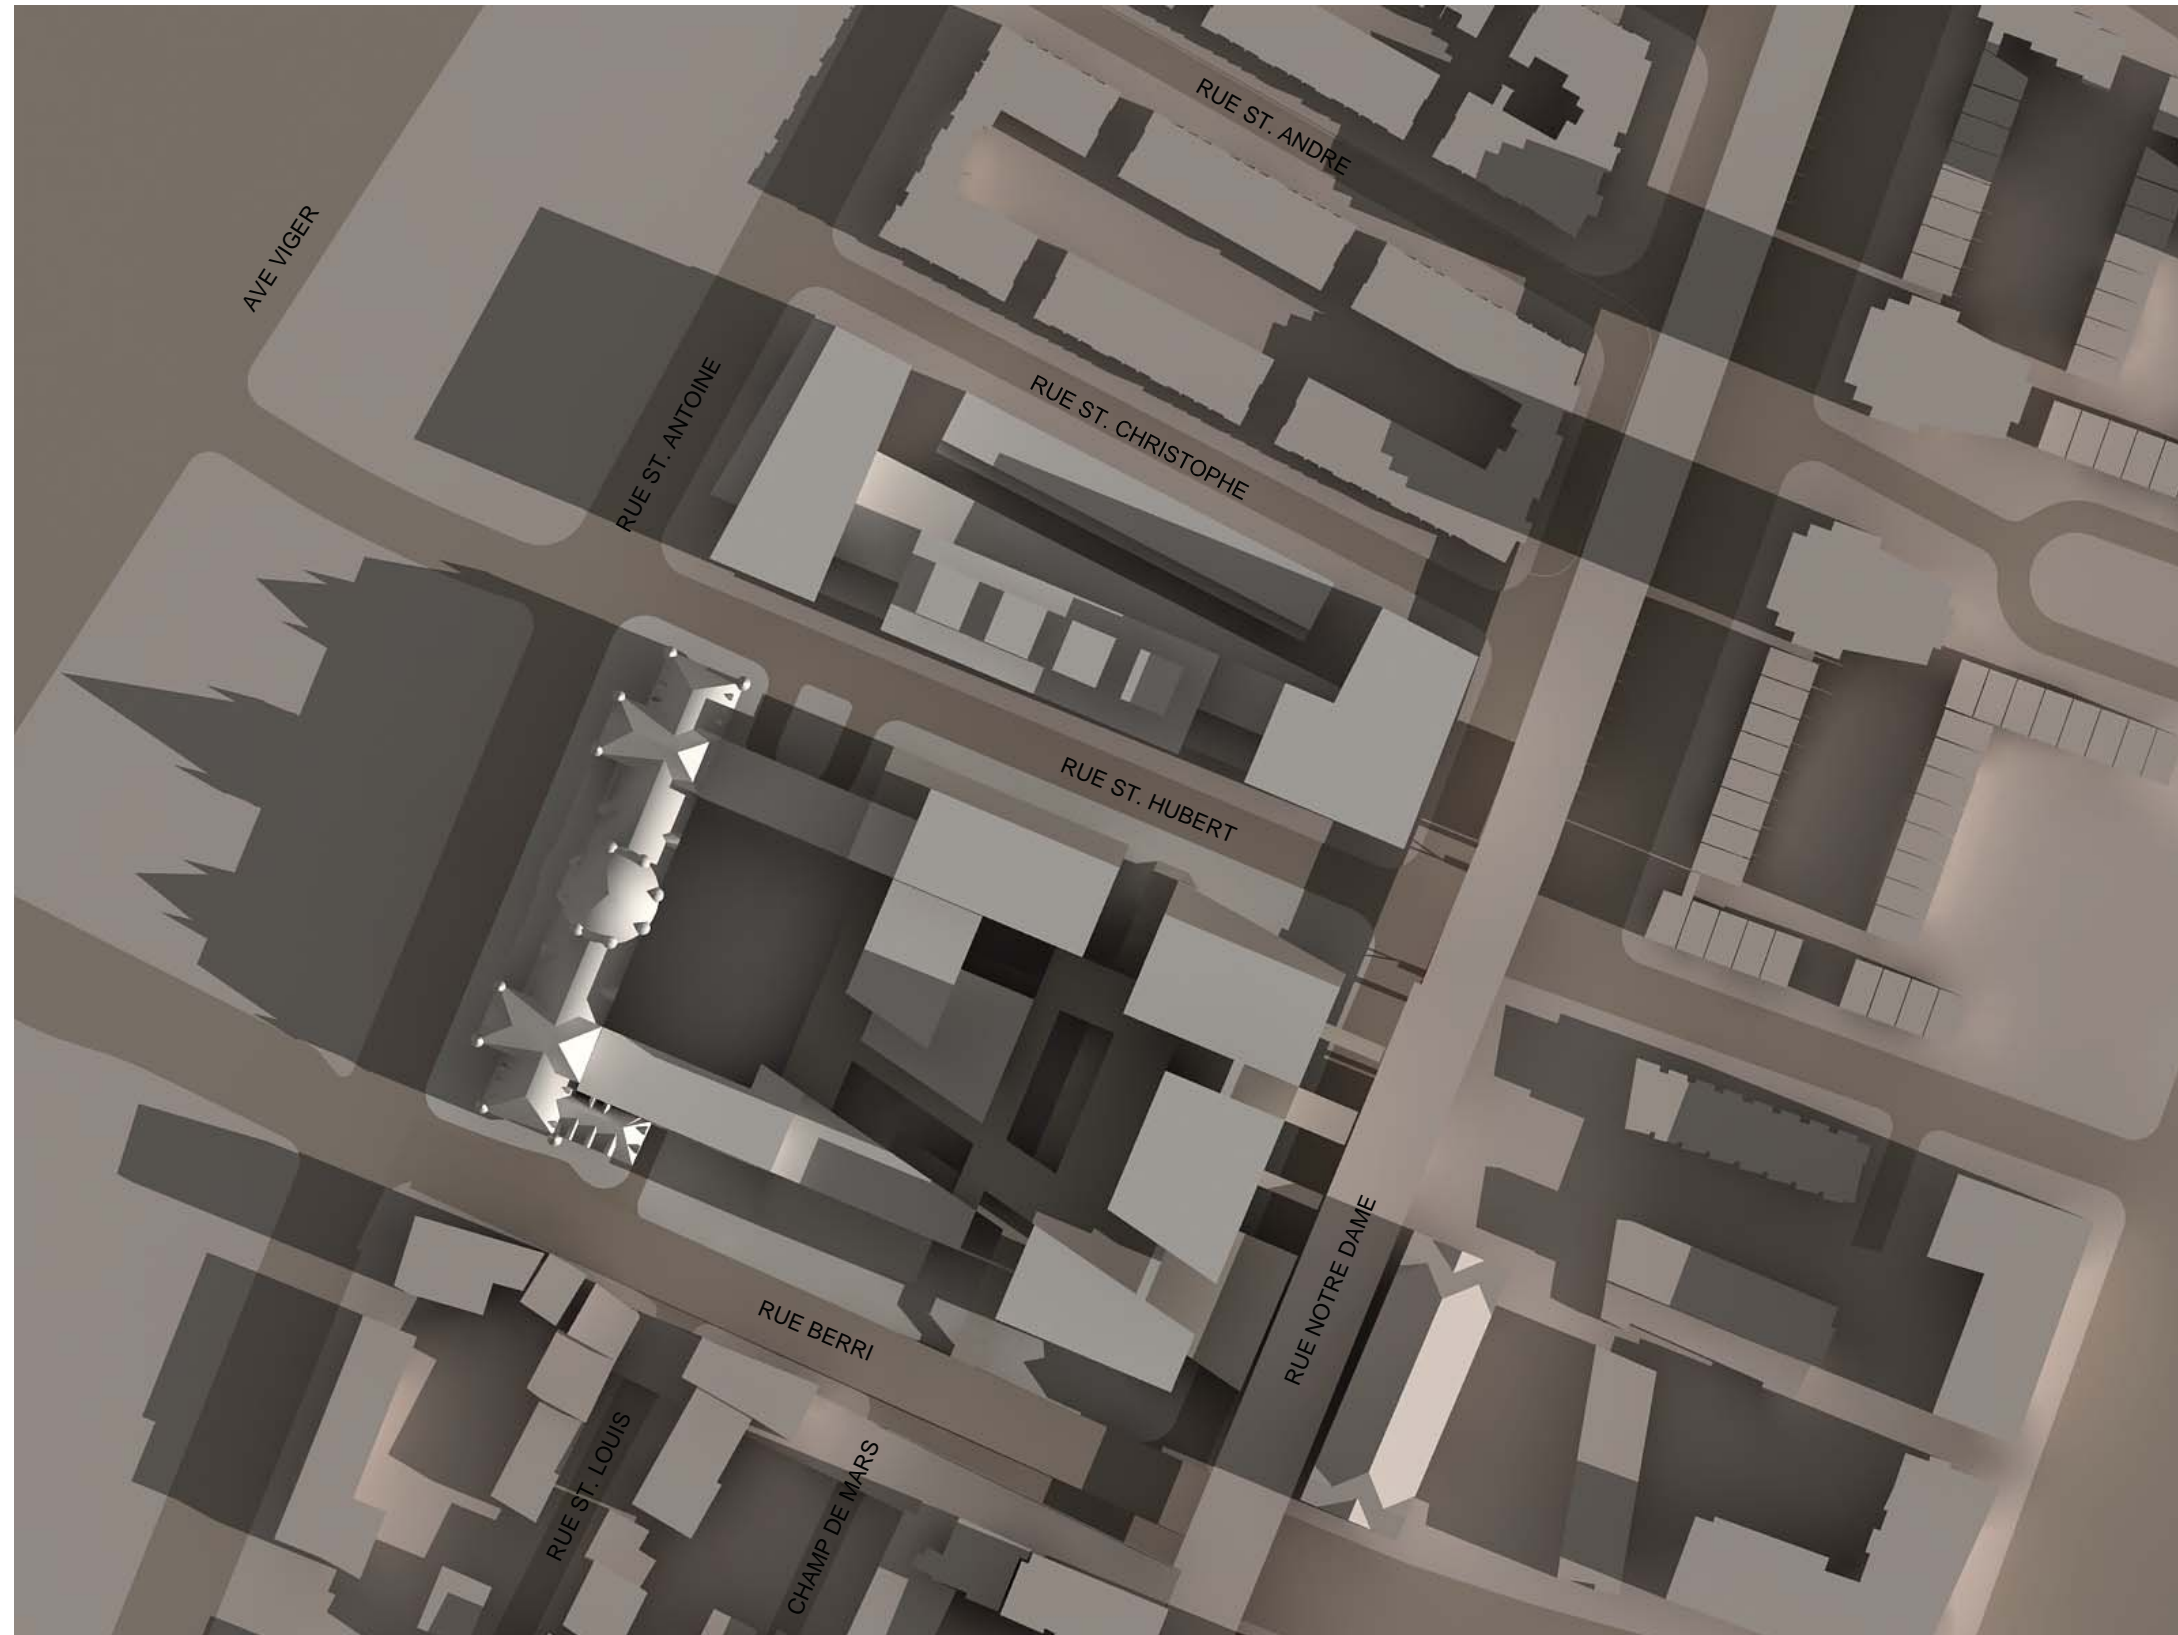

Étant située au sud du projet, la rue Berri ne subira aucun impact d'ensoleillement.
