

Dear Public Commission,

I am in opposition to this project. I am a resident of the west island and commute by car everyday to Dorval. I sit in at least half an hour of traffic just to reach autoroute 40 from the north. It is clear this project will increase the traffic on the west island, and it will reduce the quality of life for residents commuting daily.

Besides the obvious traffic increase, the main reason for my opposition to this project is the destruction of the green space. We have so few green spaces left on the island of Montreal. There are many projects around the island of Montreal that are already reducing green spaces (or plan to reduce) such as the Turcot Interchange, the expansion of the airport, the proposed light rail train, the Saint-Laurent Technoparc, etc.

The year is 2017; we need all the green space available to help citizens cope with the effects of climate change. Let's tell the world that we value our quality of life and that of our childrens' and the environment over new housing.

Juliana Lisi
